

# Enterprise Deployment of Lightning Bolt

Lessons Learned from Prisma Health

perfect**serve**. SUMMIT

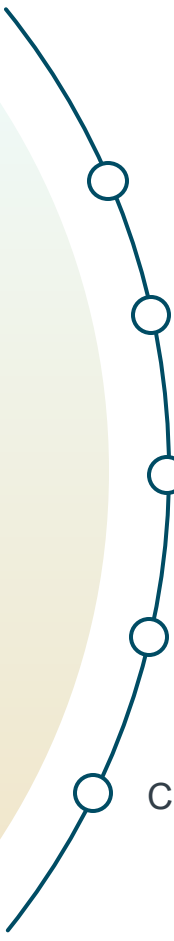

# Nicholas Perkins, DO, FACP

Chief Clinical Analytics Officer

*Prisma Health*

# Agenda

- 
- What do you mean we should just have one solution?
  - Who will use this? Defining your users.
  - What all can this thing do? Identifying key integrations.
  - Governance
  - Creating the Dream Team

# But we've always done it this way...

## Overcoming hesitation from all groups is challenging

- Everyone is busy and no one wants to learn new things

## Putting on a 'road show' to define the key advantages of a single enterprise solution can help obtain buy-in

- But only if you also hear groups out on what is pivotal to their success

## Effective leadership support is crucial

- Start your road show with leaders: Nursing, Physicians, IT, Key Committees/Groups
- Discuss any needed policies (new and updated) and where you will need support

# Benefits of an Enterprise Solution

## Creates one system to know

**Removes** intergroup differences and lessens the educational need for the entire organization.

**Eliminates** duplicated efforts from IT, education, and system day-to-day management

## Fosters a community of cooperation

Managers and schedulers across groups can now **collaborate** on solutions, tips & tricks, and schedule management practices.

## Allows for sharing resources

Groups that share personnel resources can more **easily link** schedule across teams and **reduce** the occurrence of scheduling errors.

Personnel will only have one system to monitor for schedules.

## Enhances opportunities for integrations

With one system to know and manage, IT analysts can achieve **greater expertise** and level of integration with other systems.

# Who will use this?

Often seen as a physician scheduling tool groups can **achieve greater ROI** by including nursing, therapy, IT, or any other teams for a single source of truth:

- For physicians, both inpatient and outpatient
- Residents (Can help maintain ACGME requirements)
- Inpatient nurses and their specialty teams (IV access, code teams, rapid response)
- Case Management / Social Workers
- IT Groups (Epic, Networking, Desktop support)
- Call Center Operators

# To Integrate or Not To Integrate

## Payroll

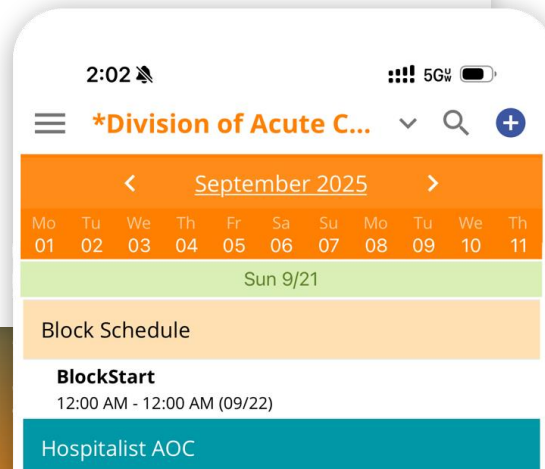

- Integrations for non-exempt employees
  - Case Management / Social Workers
  - Techs and MAs
  - IT Groups (Epic, Networking, Desktop support)
  - Call Center Operators

## Residency

- MedHub
- New Innovations
- MyEvaluations

## EHR

- On Call Finder
- OpTime
